

Maple-School

In Today's day and age, the Kids get exposure to internet at a very tender age of 8-10 years. Since Internet is a river of information, it also has negative elements in it such as Inappropriate Content, Cyberbullying, Online Predators, Phishing and Scams, Privacy Concerns, Inaccurate Information, Addiction, Identity Theft, Access to Dangerous Activities. Who assumes the crucial responsibility of monitoring 8–10-year-old children to ensure they are shielded from the perils of the internet? Isn't it the collective duty of both schools and parents to impart vital lessons about the negative aspects of the internet, especially given that children are being exposed to it at such a tender age?

Also, It's disconcerting to note that a significant number of high school graduates are found to be lacking in fundamental practical life skills. These include financial literacy, understanding investments, cultural awareness, sex education, digital literacy, cybersecurity, AI-ML, entrepreneurship, and soft skills. Often, the education system confines a 10th class student to learning solely from textbooks, leaving them unaware of practical knowledge and real-life happenings. Equipping students with practical knowledge across these diverse fields can profoundly impact their decision-making abilities in a positive manner. Moreover, exposure to a wide array of fields empowers both students and parents to make informed career choices, leading to more fulfilling and successful futures.

What will Maple-School Do?

Maple-School Will be a Tech platform which will eradicate these problems from this roots.

While it may seem like a minor issue at first glance, the problem statement carries significant weight, as it directly impacts the trajectory of the youth in our country. The lack of exposure to diverse fields and opportunities in life is causing students to make uninformed career choices, ultimately contributing to rising unemployment rates and tragically, an increase in suicides..

Likewise, the absence of awareness about the negative aspects of the internet among young children is exposing them to potentially harmful and even dangerous online environments.

This lack of understanding is leading to the corruption of innocent young minds at a vulnerable stage of their development.

By Kaushal and Shatakshi

Myself Kaushal and My Friend Shatakshi in a 15 min meeting with the principal , will discuss our solution in Deleting these problems from the roots and securing and protecting the minds and wellbeing of the youths in the country.

The aim of the meeting will not be to Sell anything to the school rather it would be to discuss solutions regarding it and take Validation of the idea from the Principal
